

Major Online Retailer Chooses OralTox® for Same-Day Hiring

One of the top five e-commerce retailers just made the switch from traditional urine testing to rapid oral fluid testing with Premier's OralTox® product. They found OralTox® presents unmatched ease and efficiency for next-level demand in the online marketplace, resulting in stress-free, same-day hiring.

To further expedite hiring with efficiency, they also incorporated the OT-Scan® app. Combining OralTox® rapid testing with the OT-Scan® application provides fast, accurate, secure results in no time. OT-Scan® integrates with the background check provider, syncing seamlessly. Now they can hire thousands of candidates same-day without extra paperwork or waiting games.

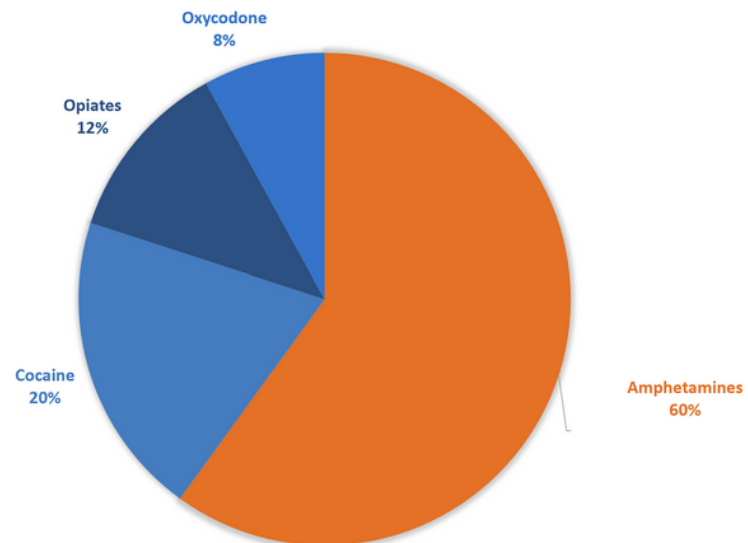

Global Need for Rapid Hiring

Companies need access to rapid hiring in order to leverage skyrocketing demand. This is why industry leaders choose OralTox® for the fastest, easiest pre-employment drug screening at volumes only OralTox® can serve - more than five million tests annually.

The pilot performed for this leading retailer motivated their switch to OralTox®. 95% of all OralTox® tested on-site resulted in a same-day hire because of a negative result. With the other 5% of positive tests, every test sent into the lab for confirmatory testing, and no hard drugs were missed. This level of accuracy matches that of traditional testing.

No more mess of coordinating with external collection sites, filing paperwork, or tampering with test results. Same-day eligibility for getting candidates to work immediately has never been so accessible as it is now with OralTox®.

Meeting Demand with OralTox® Testing

Leading retailers know what it takes to stay ahead of the curve, winning by leaps and bounds beyond all competition. It only makes sense that they continue to choose Premier's OralTox® oral fluid drug test to match their global innovation status. It is the trusted avenue to accelerate drug screening with ease, and at half the cost of traditional, laboratory-based drug testing.
